# GLOARO FOOD DELIVERY

# SUPER ADMIN & ZONAL ADMIN PANEL

Complete UI/UX + Functional Documentation

**Project:** GloAro Food Delivery – Admin Platform

**Platform:** Web/Desktop Admin Panel

**Design:** Figma UI/UX Prototype

Prepared for Project Submission / Management Review

# 1. Project Overview

GloAro Food Delivery Admin Panel is a centralized web administration system for managing the food-delivery ecosystem. The existing operational flow is retained and enhanced with Super Admin and Zonal Admin capabilities. Super Admin controls the complete platform, while Zonal Admin operates only within the assigned zone.

## Project Objectives

- Centralize restaurants, food items, orders, customers and delivery partners.
- Provide clear KPIs and operational visibility.
- Support multiple cities and operational zones.
- Separate global control from zone-level operations.
- Control payments, commissions, refunds and payouts where applicable.
- Provide structured settings, notifications and security controls.
- Use role-based access so each administrator sees only the required information.

# 2. User Roles & Access

| Role | Scope | Main Responsibility |
|---|---|---|
| Super Admin | Entire platform | Zones, Zonal Admins, settings, finance, reports and all operational modules. |
| Zonal Admin | Assigned zone only | Orders, restaurants, homemakers, delivery partners and customers within the assigned zone. |

## Super Admin vs Zonal Admin

| Area | Super Admin | Zonal Admin |
|---|---|---|
| Zones | Create/edit/manage all | Assigned zone only |
| Zonal Admins | Create/manage | No global access |
| Orders | All zones | Assigned zone |
| Restaurants | All | Assigned zone |
| Payments | Platform-wide | Only if included/permitted |
| Settings | Full | Restricted |
| Reports | Global | Not included in current Zonal Admin scope |
| Permissions | Full | Assigned permissions |

# 3. Information Architecture

## Super Admin Sidebar

- Dashboard
- Orders
- Restaurants
- Menu / Food Items
- Customers
- Delivery Partners
- Payments
- Analytics
- Offers & Coupons

- Reviews & Ratings
- Support
- Notifications
- Settings
- Zone Management
- Zonal Admins
- Roles & Permissions

### Zonal Admin Sidebar — Final Figma Scope

- Dashboard
- Orders
- Restaurants
- Homemakers
- Delivery Partners
- Customers

The Zonal Admin sidebar is intentionally kept focused. Zone Reports, Zone Performance and Complaints are not included in the current Zonal Admin Figma scope.

## 4. Authentication & Role Routing

- Email and password login.
- Show/hide password.
- Remember me.
- Forgot password.
- Login validation and error feedback.
- Role-based routing.
- Super Admin is routed to the global dashboard; Zonal Admin is routed to the assigned-zone dashboard.

## 5. Super Admin Dashboard

Purpose: provide a platform-wide overview and allow management to understand overall operations.

- Total Orders
- Total Customers
- Total Restaurants
- Active Restaurants
- Delivery Partners
- Total Revenue
- Commission
- Refunds
- Order Overview
- Order Status
- Zone Performance

- Recent Activities

## 6. Zonal Admin Dashboard

Purpose: provide a focused operational view for one assigned zone. The zone identity is shown at the top, for example “Coimbatore Zone – Zonal Admin”.

- Total Orders
- Active Restaurants
- Homemakers
- Delivery Partners
- Customers
- Today's Revenue
- Order Status

The Zonal Admin dashboard should display only assigned-zone data. It does not require Zone Performance, Zone Reports or Complaints in the current design.

## 7. Core Operational Modules

| Module | Key Features | Access |
|---|---|---|
| Orders | Order ID, customer, restaurant, amount, status, delivery | Super Admin + assigned Zonal Admin |
| Restaurants | Onboarding, verification, status, details, commission | Super Admin + assigned Zonal Admin |
| Menu / Food Items | Items, categories, price, stock, availability | Super Admin; Zonal scope where applicable |
| Homemakers | Profiles, status and zone-specific records | Zonal Admin |
| Customers | Profile, history, status and activity | Super Admin + assigned Zonal Admin |
| Delivery Partners | Verification, availability, assignments and performance | Super Admin + assigned Zonal Admin |
| Payments | Transactions, commission, payouts and refunds | Super Admin; restricted where applicable |
| Analytics | Platform performance and trends | Super Admin |
| Offers & Coupons | Codes, discounts, validity and limits | Super Admin / permitted roles |
| Reviews & Ratings | Ratings, reviews and moderation | Super Admin / permitted roles |
| Support | Support and tickets | Super Admin scope in current design |
| Notifications | Operational/promotional alerts | Super Admin / permitted roles |
| Settings | Business, payment, order, user and security configuration | Super Admin |

## 8. Order Management

Orders should support search and practical filters such as date, restaurant, customer, delivery partner, payment and status. For Zonal Admin, the data is restricted to the assigned zone.

| Stage | Meaning |
|---|---|
| Placed | Customer creates order |
| Accepted | Restaurant accepts |
| Preparing | Food preparation |
| Ready | Food ready |
| Assigned | Delivery partner assigned |
| Out for Delivery | Partner travelling |
| Delivered | Customer receives order |
| Cancelled | Order cancelled |
| Refunded | Eligible amount returned |

## 9. Restaurant & Menu Management

- Restaurant registration and verification.
- Active / inactive / pending / suspended status.
- Contact, address and cuisine details.
- Commission settings and operating hours.
- Food item name and description.
- Category and restaurant mapping.
- Price, stock and availability.
- Featured item controls.
- Search/filter and bulk actions where required.

## 10. Zone Management — Super Admin Only

Zone Management defines the operating structure for multiple cities/areas. It is a Super Admin feature and is not placed in the Zonal Admin sidebar.

| Field | Purpose |
|---|---|
| Zone Name | Operational zone name |
| City | Associated city |
| Pincode Range | Optional serviceability range |
| Delivery Charge | Default zone delivery charge |
| Status | Active / Inactive |
| Description | Optional internal notes |

## 11. Zonal Admin Management — Super Admin

- Create and manage Zonal Admin accounts.
- Assign each administrator to a specific zone.
- Manage account status and credentials.
- Use the assigned zone to define the administrator's data scope.

| Field | Purpose |
|---|---|
| Full Name | Administrator identity |
| Email | Login / communication |
| Phone | Contact / verification |
| Assign Zone | Defines data scope |
| Password | Initial credential |
| Confirm Password | Credential validation |
| Status | Account availability |

## 12. Roles & Permissions

Permissions prevent over-access and allow the platform to scale safely.

| Module | View | Add | Edit | Delete |
|---|---|---|---|---|
| Dashboard | ✓ | — | — | — |
| Orders | ✓ | Optional | ✓ | Restricted |
| Restaurants | ✓ | ✓ | ✓ | Restricted |
| Homemakers | ✓ | ✓ | ✓ | Restricted |
| Delivery Partners | ✓ | ✓ | ✓ | Restricted |
| Customers | ✓ | — | ✓ | Restricted |
| Zone Management | ✓ | ✓ | ✓ | Super Admin only |
| Offers & Coupons | ✓ | ✓ | ✓ | Restricted |
| Payments | ✓ | — | — | Restricted |
| Notifications | ✓ | ✓ | ✓ | Restricted |
| Settings | ✓ | Restricted | Restricted | Restricted |

## 13. Settings & Configuration

| Settings Area | Main Controls | Purpose |
|---|---|---|
| General | Platform name, logo, email, phone, website | Brand/platform identity |
| Business & Operations | Currency, language, timezone, serviceable cities | Operational configuration |
| Payment & Commission | Commission, gateway, payouts, refunds, tax/GST | Financial control |
| Order Settings | Preparation, auto-cancel, cancellation, scheduled orders, delivery details | Order behaviour |
| User Management | Admins, support, finance, restaurants, customers, partners | Account administration |
| Security | 2FA, login history, password policy, sessions, activity log | Platform protection |
| Notifications | Email/SMS/push preferences | Communication control |
| Integrations | Payment/communication/external services | System connectivity |
| System Logs | Administrative/system activity | Audit and troubleshooting |

## 14. Security

- Two-Factor Authentication (2FA).
- Authenticator app/email OTP and optional SMS OTP.
- Session timeout.
- Maximum login attempts and account lock duration.
- New-login notifications.
- Multiple-session policy.
- Remember-me policy.
- Password length and complexity.
- Login history.
- Active sessions.
- Admin activity log.

## 15. UI/UX Design System

| Element | Recommended Direction |
|---|---|
| Sidebar | Dark navy / blue gradient with clear active state; current Zonal Admin uses a blue gradient with orange active item. |
| Workspace | Light neutral background |
| Cards | Rounded corners and subtle shadows |
| Primary Action | Consistent brand accent |
| Status | Green success, orange pending, red error/cancelled, neutral inactive |
| Typography | Clean sans-serif hierarchy |
| Icons | Consistent line style |
| Tables | Readable headers, badges and action menus |
| Forms | Labels, required markers, helper text and validation |
| Charts | Decision-focused charts with legends |

## 16. Figma Prototype Flow

- Login → Role Selection → Super Admin Dashboard.

- Super Admin Dashboard → Zone Management → Add/Edit Zone.
- Super Admin Dashboard → Zonal Admins → Add/Edit Zonal Admin.
- Super Admin Dashboard → Roles & Permissions → Save Permissions.
- Super Admin Dashboard → operational modules → global data.
- Zonal Admin Login → Zonal Admin Dashboard → assigned-zone operational screens.
- Orders → Order Details → status/action flow.
- Restaurants → Restaurant Details → Menu/Food Items.
- Settings → configuration section → Save Changes.

### Prototype Interaction Rules

- Use one reusable sidebar instance across screens.
- Keep active navigation state consistent.
- Use overlays for Add/Edit forms and confirmation dialogs.
- Use dropdown overlays for filters.
- Use toast messages for save/update/error feedback.
- Confirm destructive actions.
- Keep search, notification and profile behaviour consistent.

## 17. Why the Advanced Features Were Added

| Feature | Business Value |
|---|---|
| Zone Management | Enables multi-city / area expansion |
| Zonal Admin | Distributes daily operations while retaining central control |
| Roles & Permissions | Prevents unauthorized access |
| Dashboard KPIs | Immediate management visibility |
| Advanced Filters | Faster record discovery |
| Security / 2FA | Protects administrative accounts |
| Payment & Commission | Improves financial control |
| Notifications | Standardizes communication |

## 18. Management Demo Flow

- Show Login / Role Selection and explain role separation.
- Open Super Admin Dashboard and explain KPIs.
- Open Zone Management and show city/zone structure.
- Open Zonal Admin Management and demonstrate zone assignment.
- Open Roles & Permissions and explain access control.
- Login as Zonal Admin and show the assigned-zone dashboard.
- Show Orders with zone-restricted data.
- Show Restaurants, Homemakers, Delivery Partners and Customers.
- Show Payments if included in the final prototype.
- Finish with Settings and Security.

## 19. Final Screen Checklist

| Screen / Module | Screen / Module | Screen / Module |
|---|---|---|
| Login / Role Selection | Super Admin Dashboard | Zonal Admin Dashboard |
| Orders | Order Details | Restaurants |
| Menu / Food Items | Homemakers | Customers |
| Delivery Partners | Payments | Analytics |
| Offers & Coupons | Reviews & Ratings | Notifications |
| Settings – General | Settings – Business & Operations | Settings – Payment & Commission |
| Settings – Order Settings | Settings – User Management | Settings – Security |
| Settings – Notifications | Settings – Integrations | Settings – System Logs |
| Zone Management | Add/Edit Zone | Zonal Admin Management |
| Add/Edit Zonal Admin | Roles & Permissions | |

## 20. Final Conclusion

The enhanced GloAro Food Delivery Admin Panel combines the existing operational flow with a clear Super Admin and Zonal Admin architecture. Super Admin has platform-wide control, while the Zonal Admin is restricted to the assigned zone. The current Zonal Admin Figma scope is intentionally focused on Dashboard, Orders, Restaurants, Homemakers, Delivery Partners and Customers. Zone Reports, Zone Performance and Complaints are not included in the current Zonal Admin design.

**Submission Note:** This document reflects the current dashboard structure and the final scope clarified for the Zonal Admin prototype.
